Abstract of EP0558423

Cosmetic or dermatologic composition in the form of an oil-in-water dispersion capable of forming composite films on various keratinous substrates. The composition comprises a fluorine-containing phase consisting of at least one hydrocarbon-based organofluorine compound which is a hydrocarbon in which at least 70%, and preferably at least 95%, of the hydrogen atoms have been replaced by fluorine atoms, the aforementioned phase being dispersed in an aqueous solution of at least one water-soluble film-forming polymer free from units of the following formula:
